

AI-PILLED MATURITY MODEL

Six levels of AI adoption. Four questions that matter.

Ann Miura-Ko

	L0 AI as a Tool Tools exist. Nothing changes.	L1 Individual Automation Individuals automate recurring work for themselves.	L2 Team Automation Workflows become shared and reusable in a team.	L3 Directed Autonomy Humans direct. Agents execute across systems.	L4 Self-Directed Autonomy Agents initiate. Humans review and approve.	L5 Self-Driving Enterprise Agents act within delegated authority. Humans govern.
 WHAT CAN AI SEE? <i>Is work legible?</i>	Nothing structured. Knowledge lives in people's heads, DMs, and tools AI can't read.	Each person's private context only.	Shared team context within team boundaries.	Company data is connected and legible across systems.	Broad operational visibility across functions and systems.	End-to-end visibility across the entire organization and environment.
 WHAT CAN AI DO? <i>Can it act?</i>	Nothing of consequence. Mostly summarize what's pasted in.	Draft, summarize, code for this individual. No action on systems of record.	Execute bounded workflows within team tools and systems.	Agents execute across systems of record with human direction.	Agents take action to achieve goals and propose next steps.	Agents act autonomously within delegated authority across the organization.
 WHO CAN EXTEND THE SYSTEM? <i>Is it repeatable?</i>	No one.	Each person reinvents alone. Power users are irreplaceable.	Shared within the team by non-engineers. Not shared across teams.	Workflows built by many. Guardrails defined by engineers.	Non-engineers build and own production workflows and agents.	The system improves itself. Anyone can extend with guardrails and standards.
 HOW HAS THE ORGANIZATION CHANGED? <i>Has the org evolved?</i>	Org chart, processes, and KPIs are unchanged. 	Org chart, unchanged. Maybe a Head of AI. 	Functional efficiency. Silos and org chart unchanged. 	Roles shift. New agent-native processes emerge. 	Org design evolves around outcomes and autonomy. 	The organization operates as a network of human + AI systems.
